

# iLightCABLE Model No.: VP-901CM

**This USB data and power cable can be connected to the standard USB port. Thus you can quickly and easily charge your mobile phone with a micro USB interface and also transfer data. During the charging process the LED lights up in red. As soon as your device is fully charged,**

**Features :**

1. The Micro USB to USB Smart Sync / Charge Cable connects your Android Smart Phone/Device to a USB port on your computer for efficient data syncing and battery charging, or convenient charging from a wall outlet when connected to a USB power adapter.
2. The LED LIGHT will indicate your charging status at a glance without having to activate the screen.
3. Update Apps, Music, Pictures & more to your Android Smart Phone/Device with the Smart Sync / Charge Cable.

**Note :**

The circuitry inside the cable to detect the status of the battery is very sensitive. Your device may show that the battery is fully charged, but the LED on the cable is flashing red and blue. This is normal and may be caused by an aging battery or your device may still be drawing enough power to have the cable detect the battery as not being fully charged.

**Specification:**

- Connector: USB 2.0-A male > USB micro-B male
- LED indicator: 1. Lights up red: rechargeable battery will be charged  
2. Flashing red / blue – rechargeable battery is nearly fully charged
